Intelligent Control Mode

Main Function

This is hybrid solar energy street light. When the battery storage is insufficient (the battery voltage is lower than 9.6V), the luminaire will automatically switch to the mains power supply. When the solar power supply restores the voltage, the system will automatically cut off the mains power supply and restore the solar power supply.

4 Stages Night Mode

Infrared sensor
 θ (Angle): 60°
 H(Height): 6m
 D(Width): 7m

* Please note the sensor function is available from time 1 to time 4.
 * You can set the fixtures with 4 stages timer dimming yourself by the remote control.

PIR Sensor Detect Areas

Factory Default setting

With sufficient natural light, the light keeps charging.

The light keeps 100% brightness for 0.5 hour.

The light keeps 50% brightness when presence is detected in the 1st 4 hours.

The light keeps 10% brightness when no presence is detected after 30S hold time in the 1st 4 hours.

The light keeps 20% brightness when presence is detected in the 2nd 4 hours.

The light keeps 10% brightness when no presence is detected after 30S hold time in the 2nd 4 hours.

The light keeps 10% brightness for 3 hours until sunrise.

The Controller recognizes day and night based on the Solar Array Open Circuit Voltage, this day/night threshold can be modified according to local light conditions and the Solar Array Used, setting range 3.0 ~8.0V
